Normal human body temperature, as kids are taught in North America, is 98.6°F. But how well is this supported by data? Researchers obtained body-temperature measurements on randomly chosen healthy people (Shoemaker 1996). The data for 25 of those people are as follows:

```
read.csv("datatable.csv")
```

individual	temperature
1	98.4
2	98.6
3	97.8
4	98.8
5	97.9
6	99.0
7	98.2
8	98.8
9	98.8
10	99.0
11	98.0
12	99.2
13	99.5
14	99.4
15	98.4
16	99.1
17	98.4
18	97.6
